AMENDMENTS TO THE CLAIMS

2

Please replace all prior versions, and listings, of claims in the application with the following list of claims. Additions are indicated by underlining and deletions are indicated by strikeouts and/or double bracketing.

1-18. (Canceled)

- 19. (Currently Amended) A method for treating asthma comprising:

 administering to a subject an immunostimulatory oligonucleotide comprising an immunostimulatory motif comprising a 5'-cytosine-guanine-3', wherein the cytosine of the 5'-cytosine-guanine-3' is unmethylated, wherein the oligonucleotide has a length of 8 to 100 nucleotides, wherein at least one internucleotide linkage in the oligonucleotide has a phosphate backbone modification, wherein the immunostimulatory oligonucleotide is administered without an allergen in an amount effective to treat asthma.
- 20. (Previously Presented) The method of claim 19, wherein the subject is selected from the group consisting of human, dog, cat, horse, and cow.
- (Previously Presented) The method of claim 19, wherein the immunostimulatory motif
 comprises a CG flanked by two 5' purines and two 3' pyrimidines.
- (Previously Presented) The method of claim 21, wherein the immunostimulatory motif
 comprises more than one CG dinucleotide.
- (Previously Presented) The method of claim 22, wherein the immunostimulatory motif comprises AACGCTCG.
- (Previously Presented) The method of claim 21, wherein the immunostimulatory motif
 comprises the sequence 5'-AACGTT-3'.

- 25. (Previously Presented) The method of claim 21, wherein the immunostimulatory motif comprises a nucleotide sequence selected from the group consisting of AGCGTC, GACGTT, GACGTC, AACGTT, and AGCGTT.

3

(Previously Presented) The method of claim 21, wherein the immunostimulatory motif 26. comprises a nucleotide sequence comprising:

X1X2CG X1X4

wherein X1X2 is selected from the group consisting of GpG, GpA, and ApA, and X3X4 is selected from the group consisting of TpT and CpT.

(Previously Presented) The method of claim 21, wherein the immunostimulatory motif 27. comprises a nucleotide sequence comprising:

X₁CG X₂

wherein X1 is selected from the group consisting of G and A, and X2 is selected from the group consisting of T and C.

- (Previously Presented) The method of claim 19, wherein the immunostimulatory 28. oligonucleotide is administered by injection.
- (Previously Presented) The method of claim 19, wherein the immunostimulatory 29. oligonucleotide is administered to skin by transdermal route.
- (Previously Presented) The method of claim 19, wherein the immunostimulatory 30. oligonucleotide is administered by a route that allows the oligonucleotide to be taken up by the appropriate target cells.
- (Previously Presented) The method of claim 30, wherein the target cells are in the airway of 31. the subject.

Application No. 10/743,625 Amendment dated August 14, 2009 Reply to Office Action of April 16, 2009

- (Previously Presented) The method of claim 19, wherein the immunostimulatory oligonucleotide is linked to a molecule.
- 33. (Previously Presented) The method of claim 32, wherein the molecule is a targeting moiety.
- (Previously Presented) The method of claim 32, wherein the molecule interacts with a target cell surface.
- 35. (Previously Presented) The method of claim 19, wherein the immunostimulatory oligonucleotide is linked to a target cell specific binding agent.
- 36. (Previously Presented) The method of claim 19, further comprising administering an immunotherapeutic agent.
- 37. (Previously Presented) The method of claim 19, wherein eosinophil accumulation in lung tissue is reduced
- 38. (Previously Presented) The method of claim 19, wherein inflammation is prevented.
- 39. (Previously Presented) The method of claim 19, wherein the subject is a human.
